

# Coping with Prostate Cancer - Prevention and Cure of Mans Most Common Cancer

Important as it is to understand the risk factors concerning prostate cancer, one should also know there are many myths having no link to this disease. Probably the most consistent myth or misconception is that having non-cancerous conditions of the prostate increase the risk of developing prostate cancer. NOT true! Granted, these non-cancerous conditions may cause symptoms not unlike those of prostate cancer and deserve full evaluation by a physician. However, there is no evidence that having BPH or prostatitis increases the risk for developing prostate cancer. Numerous research studies have shown the presence of BPH does not make a man any more or less likely to develop prostate cancer. Rest assured the growth of the prostate in men with BPH is unrelated to prostate cancer. That being said however, for those of you who have received the diagnosis and need to understand more for your own piece of mind, this book is intended to educate, inform and aid peace of mind.

Other than skin cancer, it is the most common cancer affecting men, View all of CancerCares resources to help you better cope with prostate cancer Rising Stars Targeted RFP in Prostate Cancer Prevention Prostate cancer is usually thought of as an old mans disease.
